What is Accessibility in Web Development? Best Practices for Web Accessibility
freeCodeCamp.org / 1h
Everyone should be able to use technology, regardless of their abilities or disabilities. An accessible website or platform attracts a broader audience and has a high chance of achieving user retention. This article will discuss the...

How to Use Time To Live in Event-Driven Architecture in AWS
freeCodeCamp.org / 16h
Distributed systems generally involve the storage and exchange of huge amounts of data. Not all data is created the same, and some of it can even expire – by design. As the Buddha said, "All conditioned things are..."

Need a JSON object comparison that's better than line-by-line
DEV Community · react / 53min
Even though JSON objects are structured most free and online tools for comparing JSON ignore the structure and process objects line by line. Those basic comparison tools return poor results with many false positives and m...

Deploy ReactJs website on Apache server (Hostgator) with Vite
DEV Community · 1h
Why on earth deploy to Apache/Hostgator? To see if it works. That simple. And does it work? Of course it works, but it needs a few things to make it work properly. Let's go from the beginning it's a simple website, but it will b...

Difference between `||` and `??` in JS
DEV Community · 1h
Basically, both operators. The most fundamental difference lies in how they interpret the result of their left expression. || treats its left as a boolean. Regardless of what the left expression is, it ultimately evaluates to either tru...

How to handle user input in a React Native application
DEV Community · 1h
User input is the lifeblood of most mobile applications. It allows users to interact with your React Native app, providing data and instructions that drive the functionality. Here's a deep dive into handling user input effectively in yo...
